

Corporate Policy

Integrated management systems for quality, environment, energy, product safety / hygiene, and occupational safety and health

The LOGO tape group was founded in 1998 as an MBO from the tesa company NOPI GmbH in Harrislee, Germany and has since developed into a group of European companies active in the fields of self-adhesive tape and co-extruded film production as well as packaging and printing solutions.

Production plants are situated in Harrislee, Flensburg, and Mannheim (Germany); Chojnice, Poland; as well as in Kaunas, Lithuania.

Sales are made by sales organizations in Germany, France, Great Britain, Austria and Poland, as well as direct export business.

The basis for our successful path is built on solid foundation: our dedicated and motivated employees and our strategy as a quality producer in niche segments with special products of the self-adhesive technology and multilayer films.

The joy of innovation and the passion to produce high-quality products is our fundamental mind-set, out of responsibility towards our company and as a promise of quality to our customers. Today and in the future.

To be able to systematically continue along this path, we have set up an integrated management system for quality, environment, energy, product safety / hygiene, and occupational safety and health. The basis for our actions is our corporate policy.

Corporate policy of the LOGO tape group

The satisfaction of our customers, the quality of our products and processes, occupational health and safety, compliance with hygiene requirements, environmental protection and the sustainable use of energy all have high priority in our company and are equally important corporate goals. This corporate policy forms the framework for corresponding goals.

As a principle, we always comply with the applicable legal requirements and our binding obligations.

Through our information and communication processes, as well as the continuous education and training of our employees, the transfer of responsibility and the clear definition of competences as part of our management system documentation, we ensure the commitment and promote the sense of responsibility of our employees for our corporate goals. All our actions and the way we behave is grounded in our ethical principles.

The general management undertakes to continuously improve the integrated management system and its performance, as well as to provide the information and resources required to achieve the goals.

Corporate goals for quality

At the core of our quality policy is our quest for the best possible customer satisfaction and the continuous improvement of the processes that contribute to achieving this goal.

Our strategic focus is market-, customer- and result-oriented and leads to our goal of market leadership in terms of quality, service and innovation in our market segments.

To ensure customer satisfaction, we maintain a well-structured distribution, production and service system in which quality is our top priority. The internal structures are adapted to the needs and requirements of the market and our customers as well as legal requirements. Our employees are qualified to meet these changing requirements.

We discuss and develop new market-driven products in cooperation with our customers in order to obtain the best possible benefits for both sides.

Corporate goals for environmental protection and the sustainable use of energy

We commit ourselves to avoid unnecessary environmental pollution as much as possible, to continuously reduce the environmental impact and to continuously improve the energy-related performance, as well as the continuous improvement of our environmental and energy management system with the aim of improving our environmental performance.

We regularly analyse our energy consumption, identify potential energy savings and set strategic and operational goals to improve energy performance.

We handle our resources carefully. When selecting raw materials and supplies, we strive to use the most environmentally friendly alternatives possible.

In the planning of processes and changes as well as the procurement of new production lines and aggregates, we support the purchase of energy-efficient products and services.

The basis of our environmentally and energy-conscious actions is the adherence to the binding obligations to which we commit ourselves and whose compliance we regularly check.

We frequently inform our employees about our environmental activities, as well as our activities aiming at improving our energy-related performance.

Corporate goals for occupational health and safety

We commit ourselves to proactively work with our employees to identify and eliminate any work-related dangers and minimize any risks in order to prevent work accidents and illnesses.

We inform and instruct our employees about dangers and stress and observe the applicable safety regulations for all activities and instructions.

We recognize and report faults and deficiencies that affect occupational safety and rectify them immediately.

We provide extensive occupational health care through occupational health examinations, targeted medical advice and information.

Our Code of Conduct commits us and our employees to adhering to ethical principles.

Corporate goals for hygiene

Cleanliness and order in all areas support us in implementing the stated principles of action and in achieving our goals.

To create order, we are pursuing clear structures with clear identification in our production areas. A safe and healthy working environment is a prerequisite for meeting hygienic requirements and for manufacturing safe and legally compliant products with regard to food safety.

Our contractual partners and suppliers are integrated in our management system.

We provide targeted information about our focus on improving environmental protection, hygiene management and occupational safety, and integrate external companies on our premises into our management system.

Harrislee, September 2020

Dr. Ulrich Wesselmann
